

Da tetto a tetto, quando il CNC fa la differenza

Un tetto tra i tanti nel web.

Fonte: Impresa Patacchini.

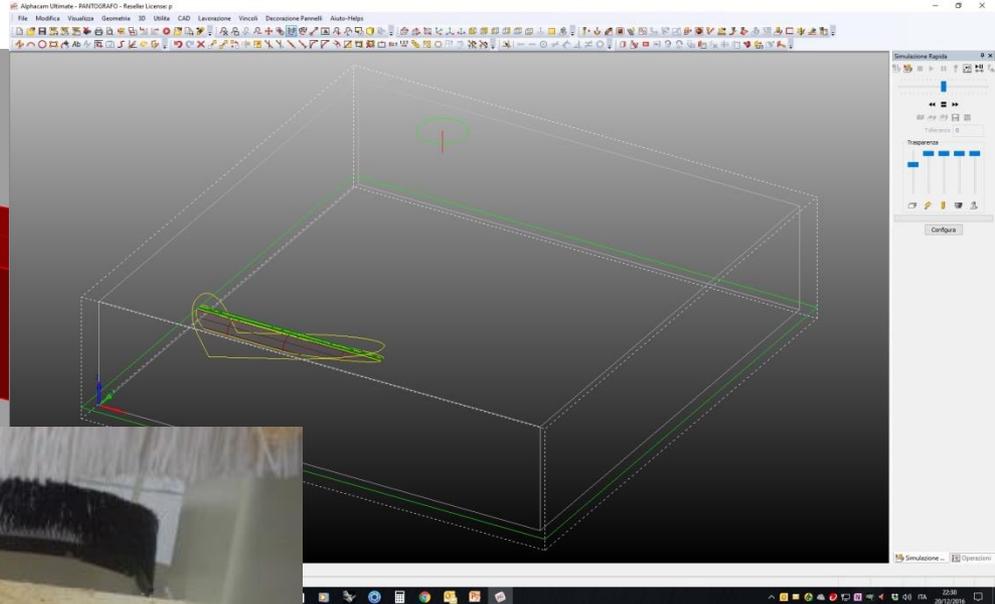

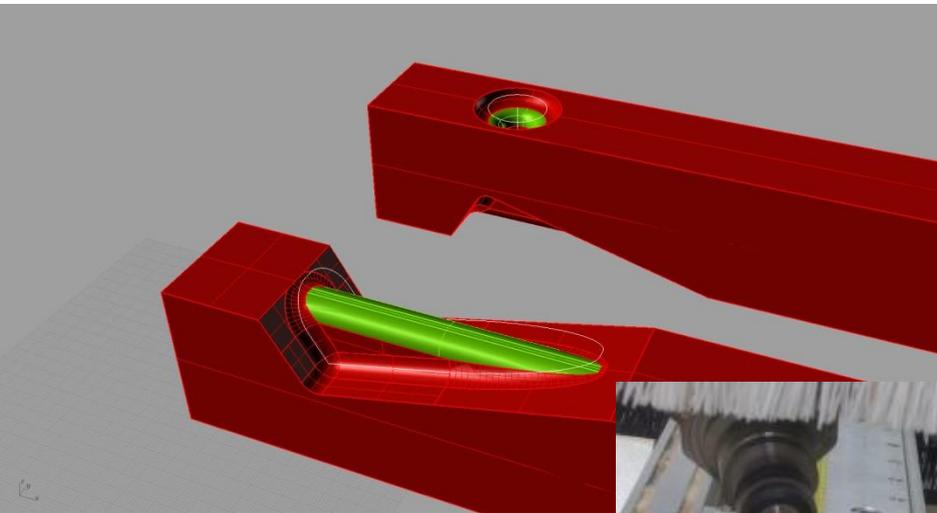

Salta agli occhi il monaco giustamente ingrossato. Deve accogliere cinque membrature, tra puntoni e falsi puntoni.

Stereotomia del positivo e del negativo:

Nel **CAD**

Nel **CAM**

A bordo **CNC**

Progetto - programma di lavorazione – elettrofresatura: non più come momenti separati.

Pezzi a terra di un «mini cantiere».

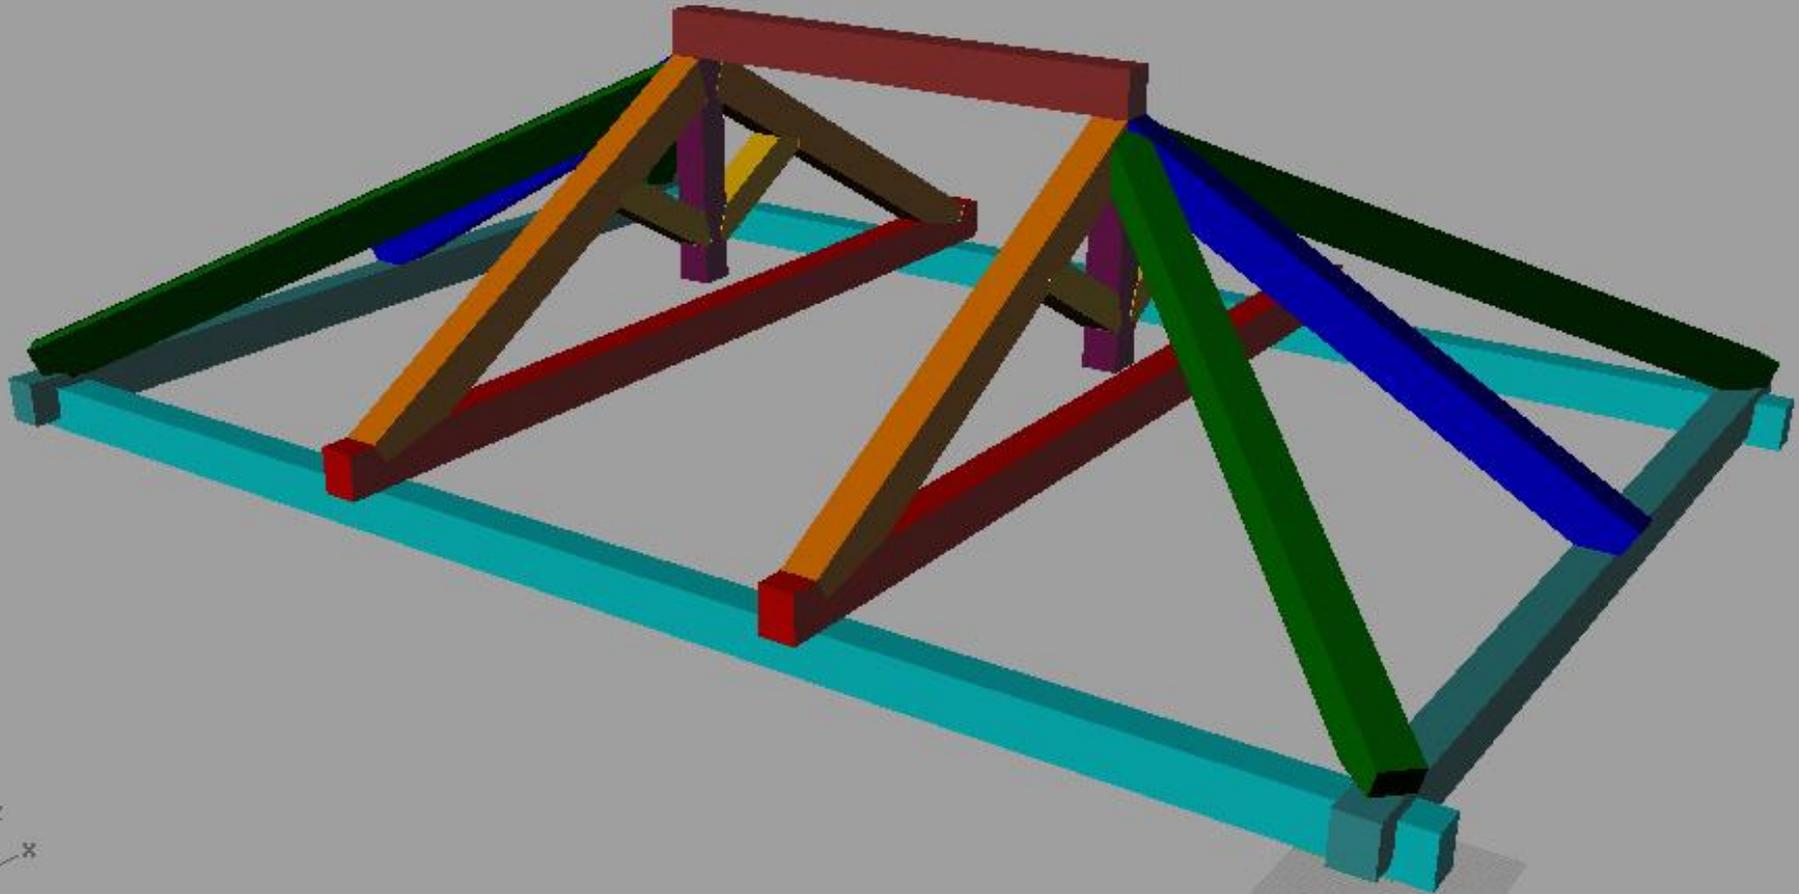

Il monaco non fa più differenza.

Testata di mini-catena a bordo macchina.

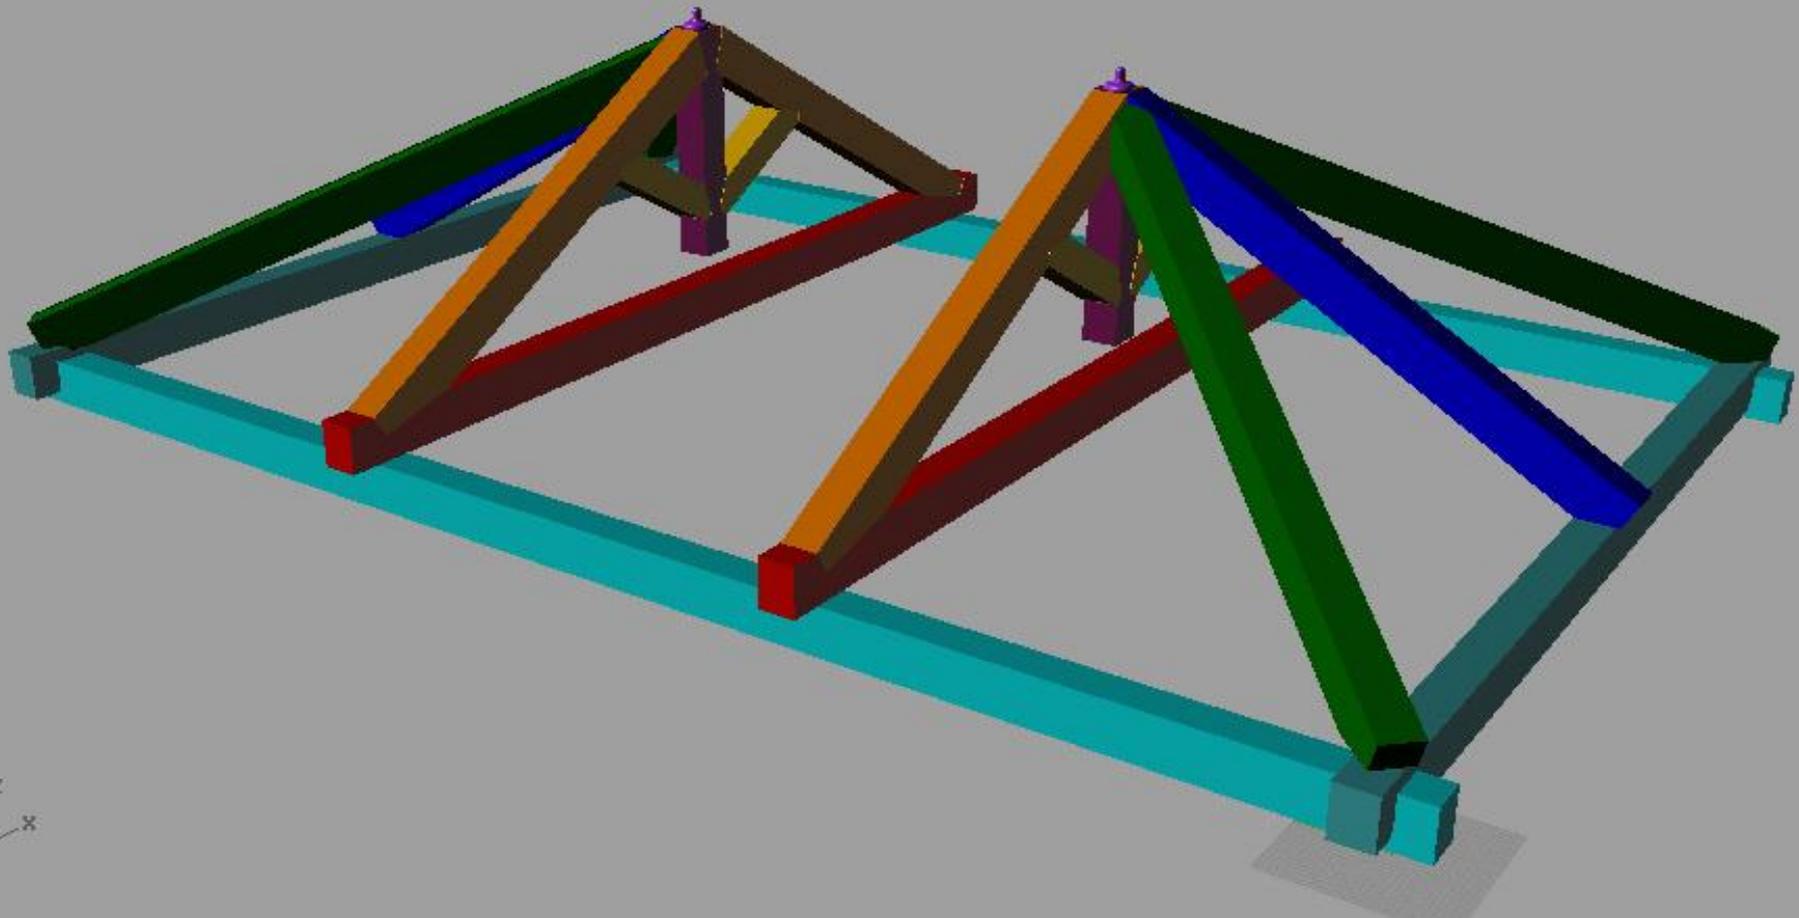

Stand in Fiera.

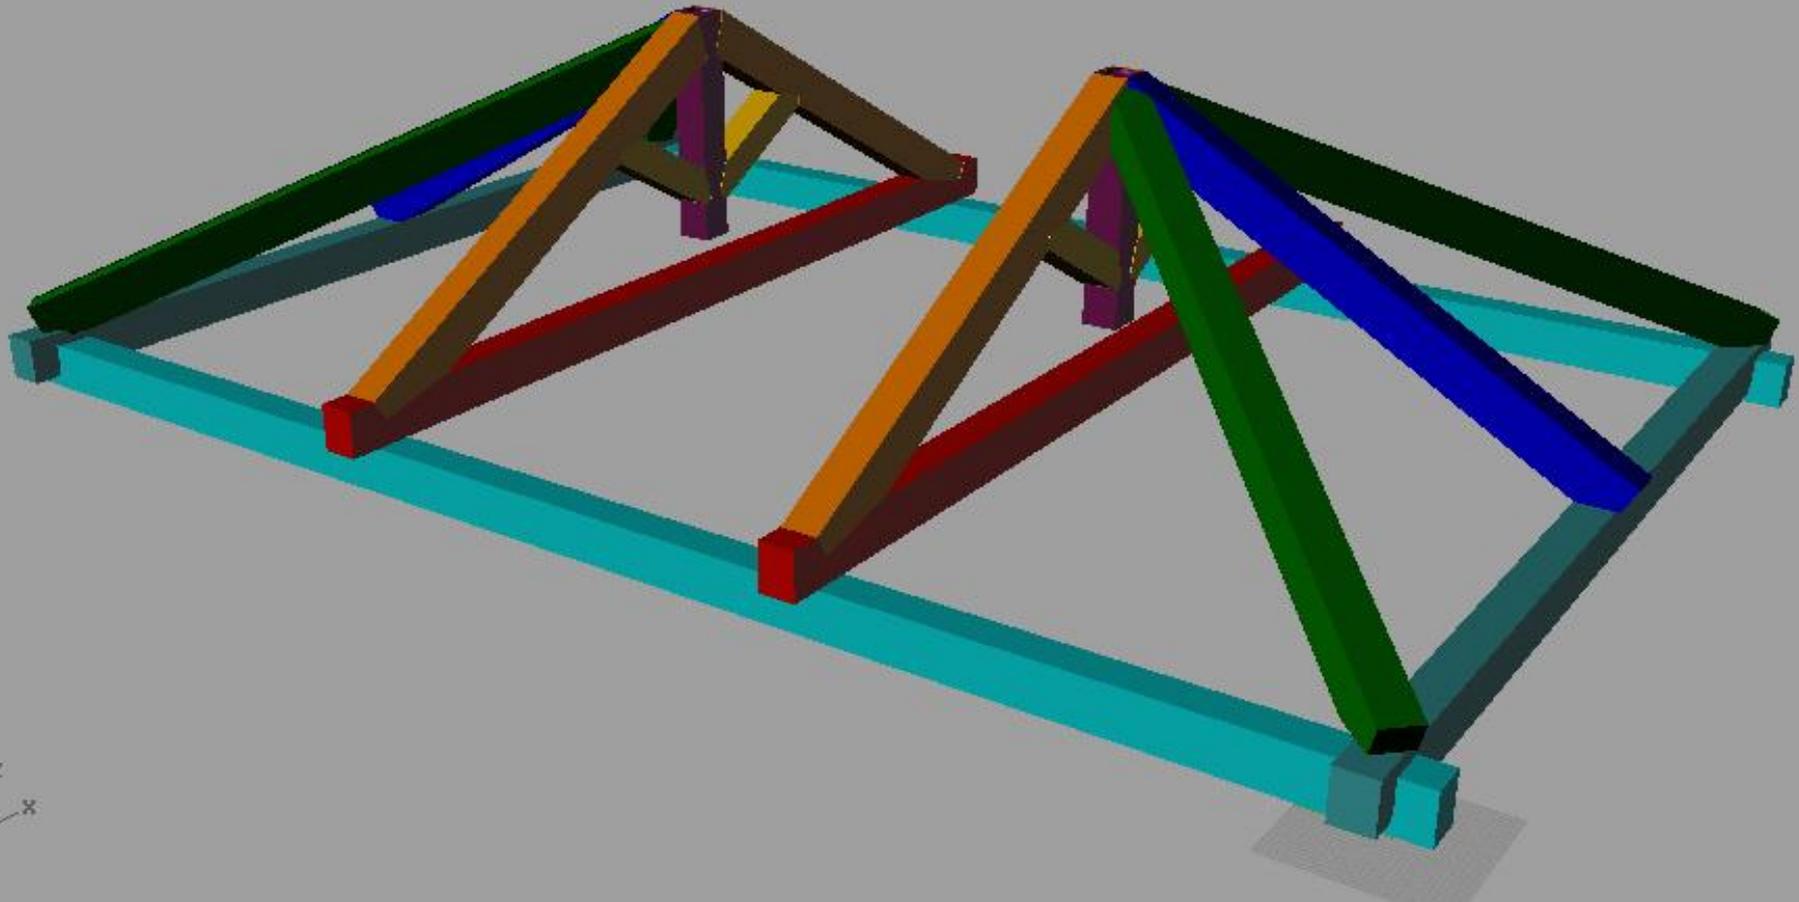

Tetto tutto...

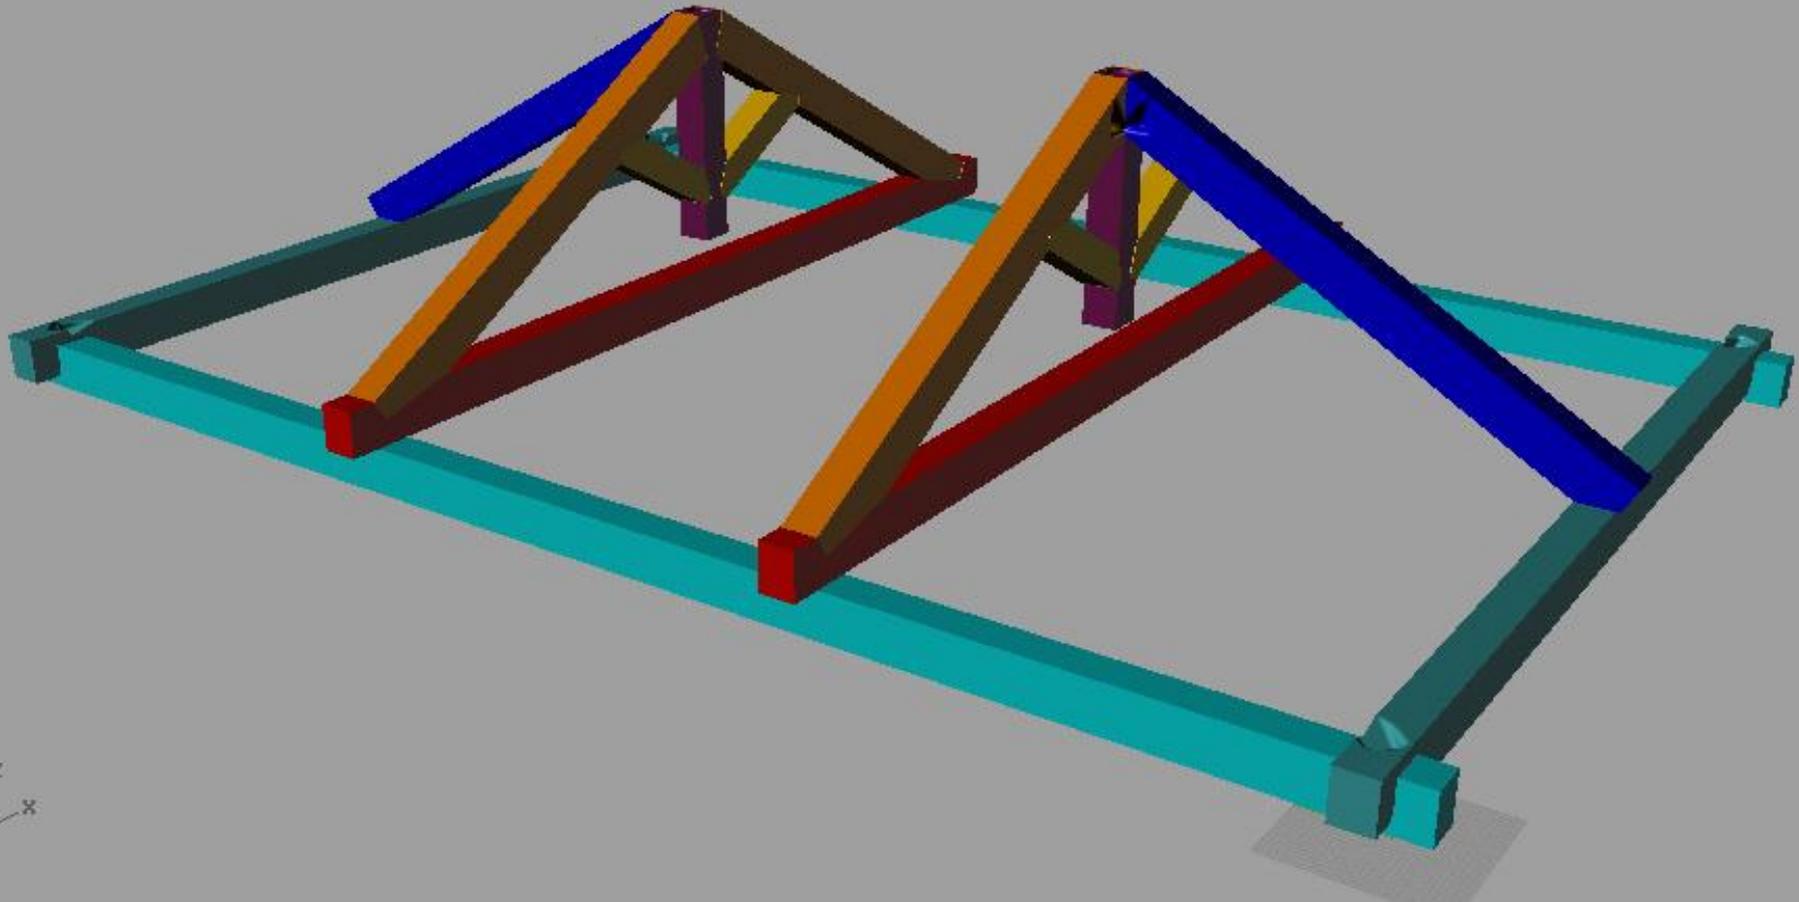

...meno la trave maestra...

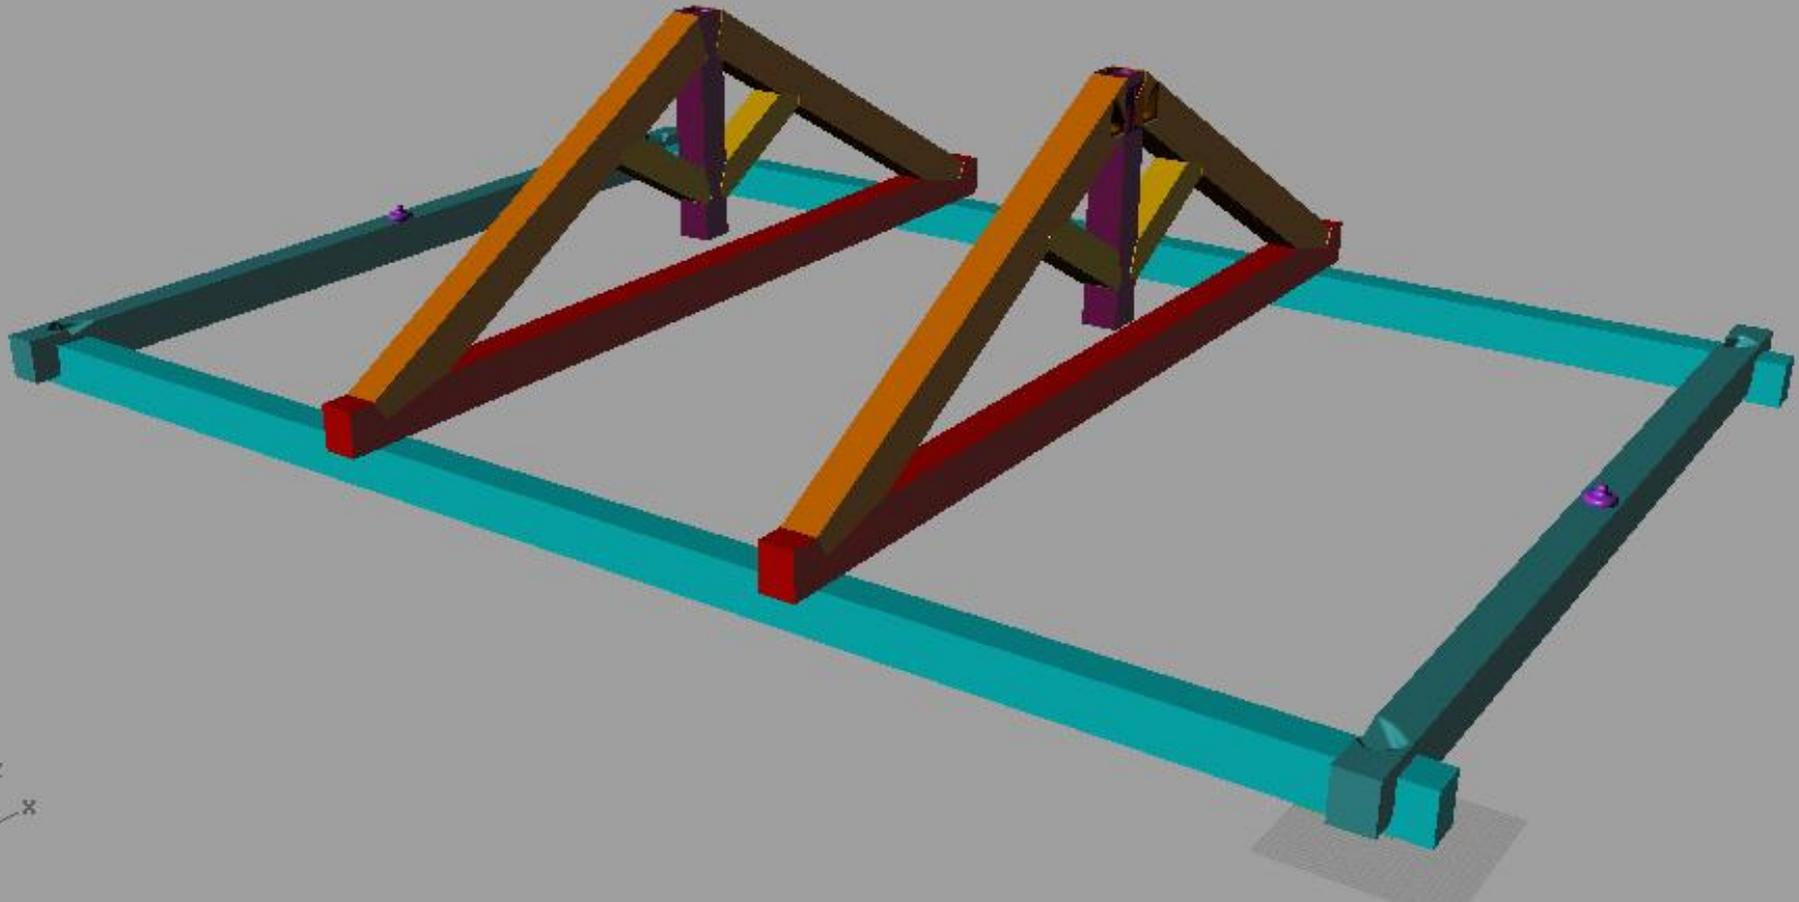

...meno le spine apicali...

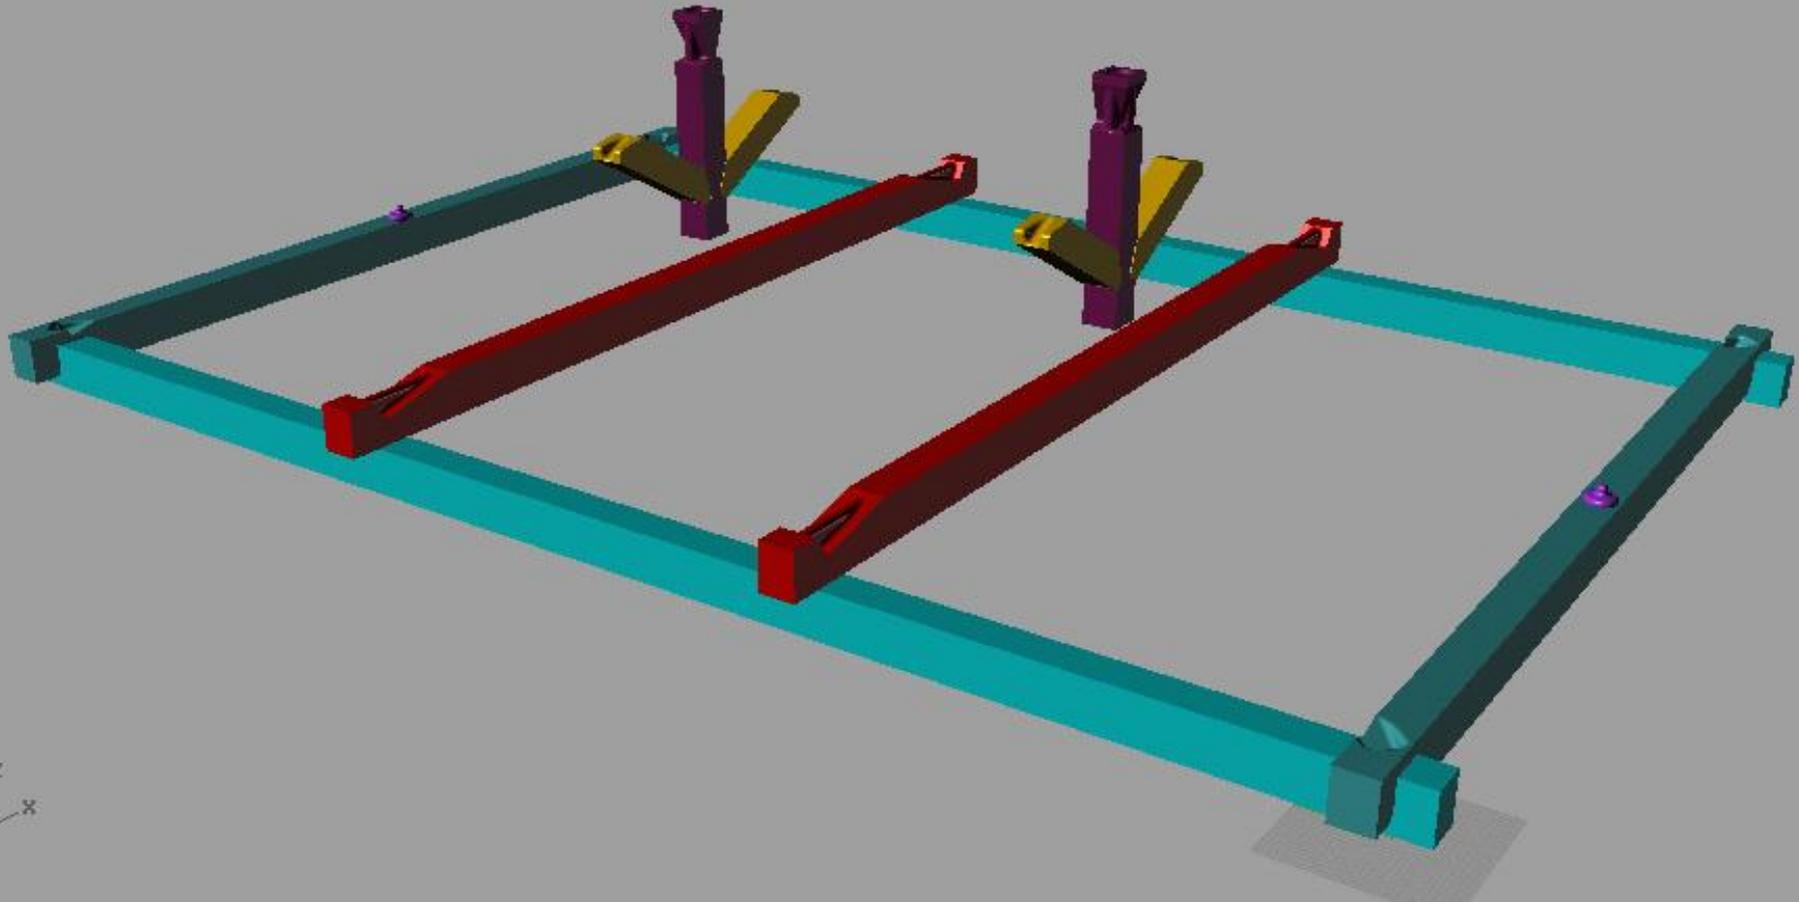

...meno i falsi puntoni, diagonali...

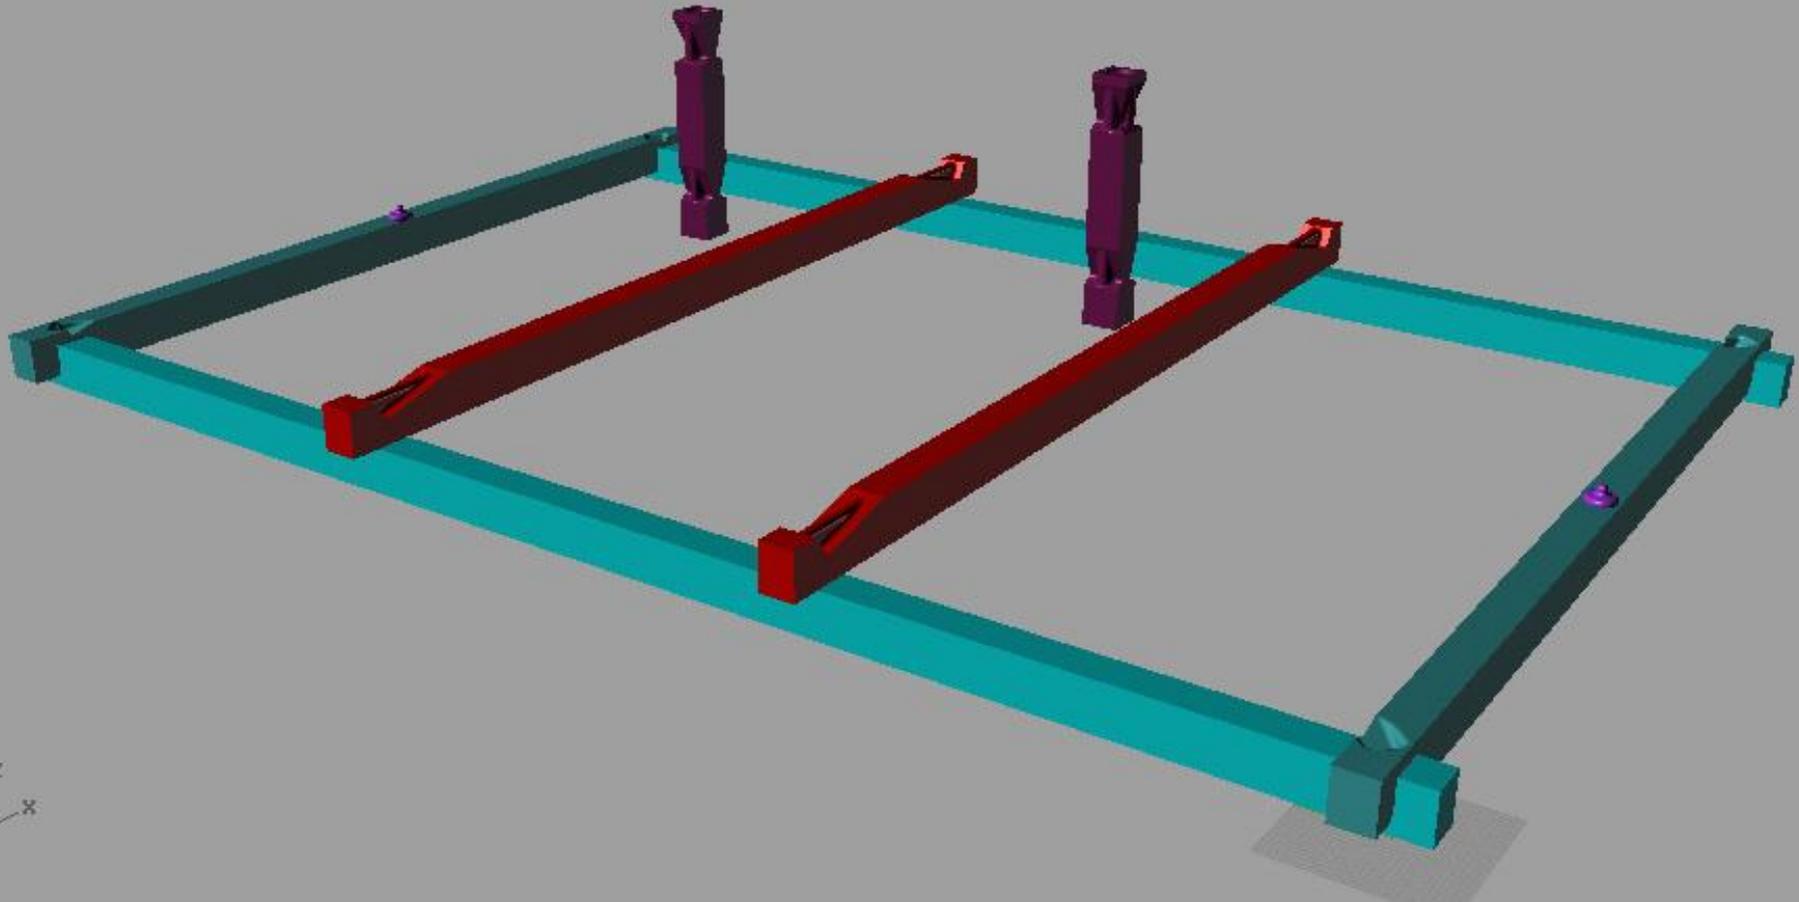

...meno i falsi puntoni, assiali...

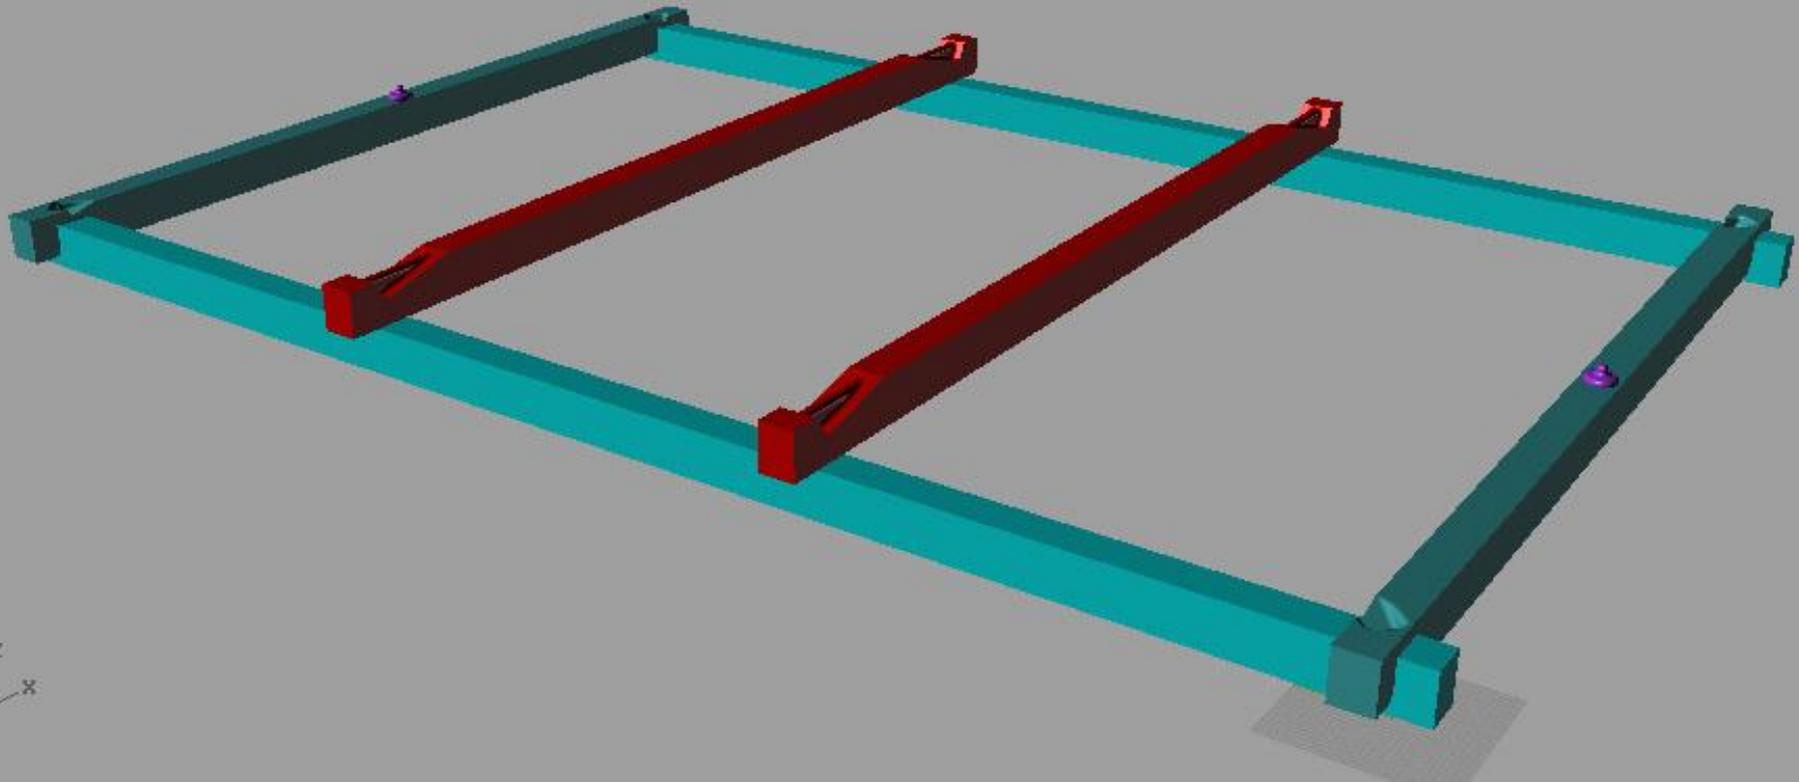

...meno i puntoni ordinari...

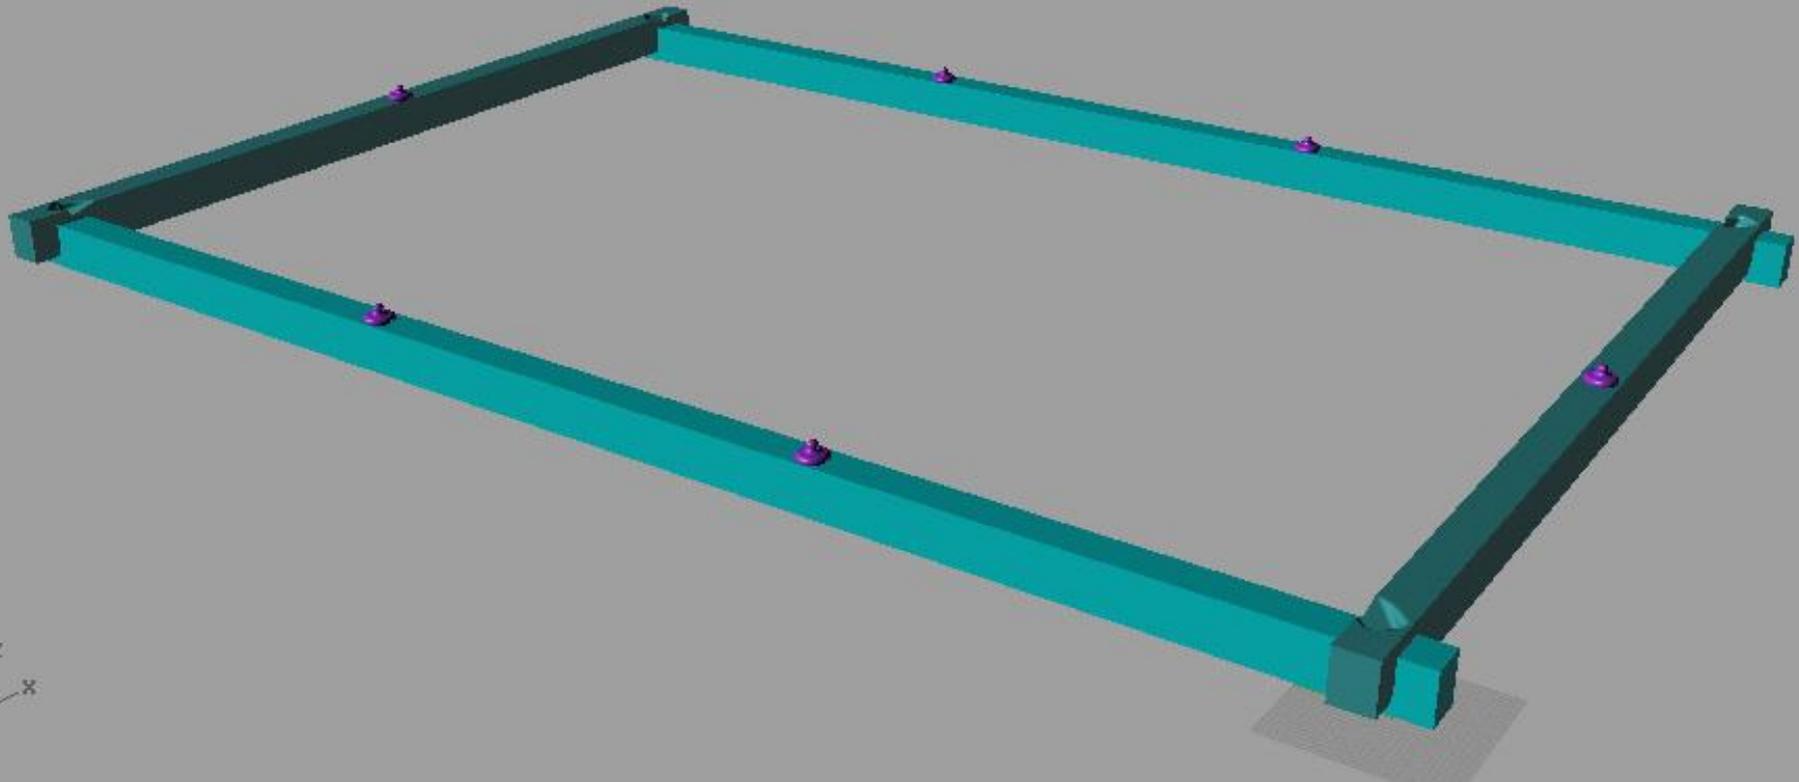

...meno le saette...

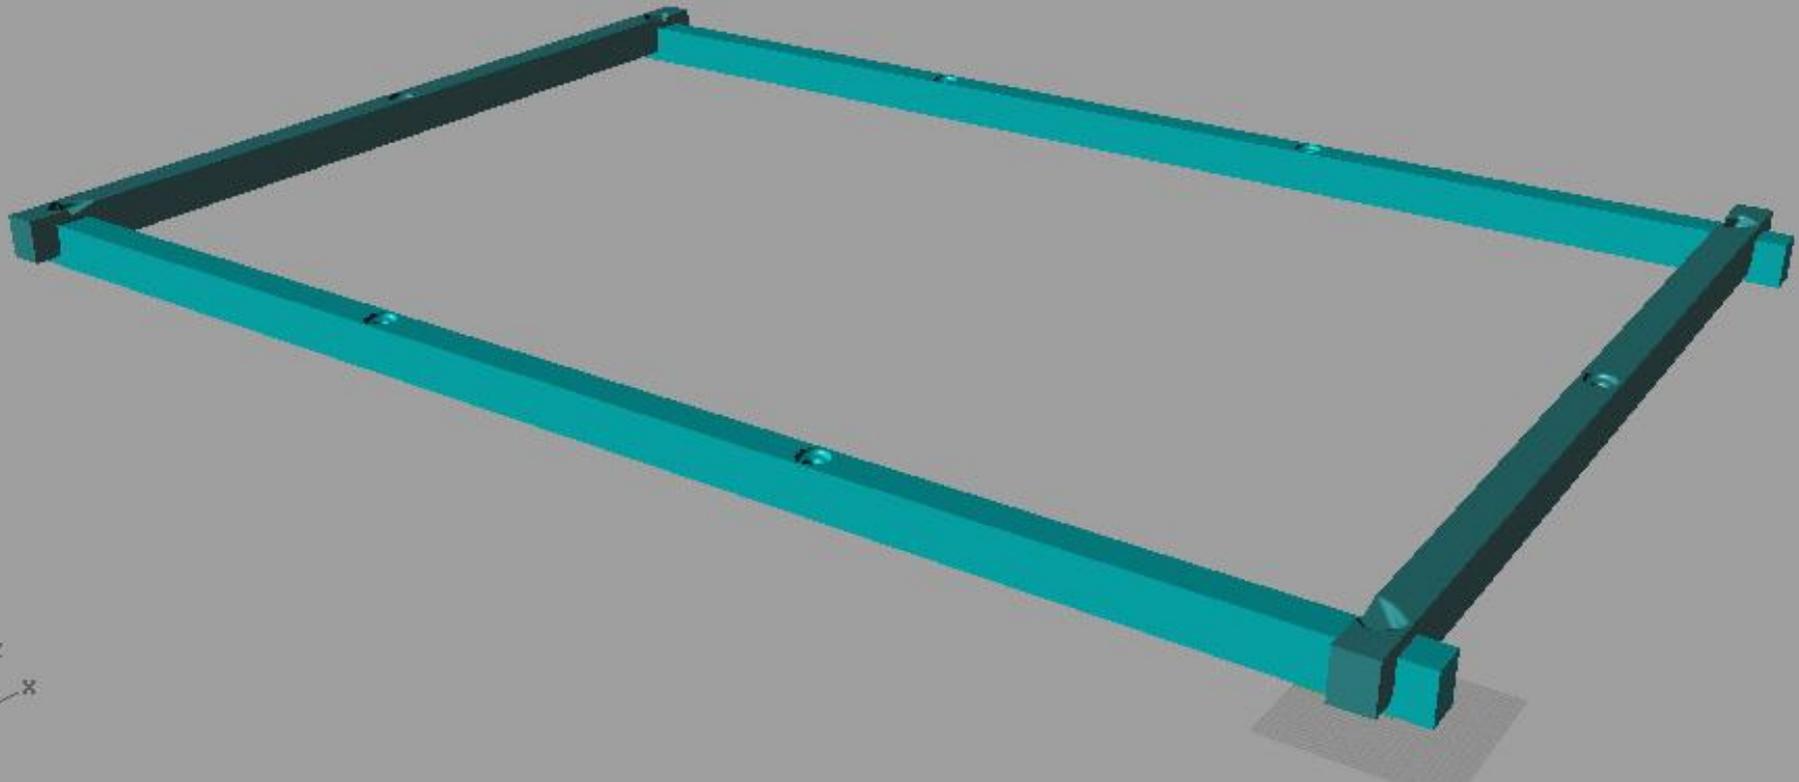

...meno i monaci...

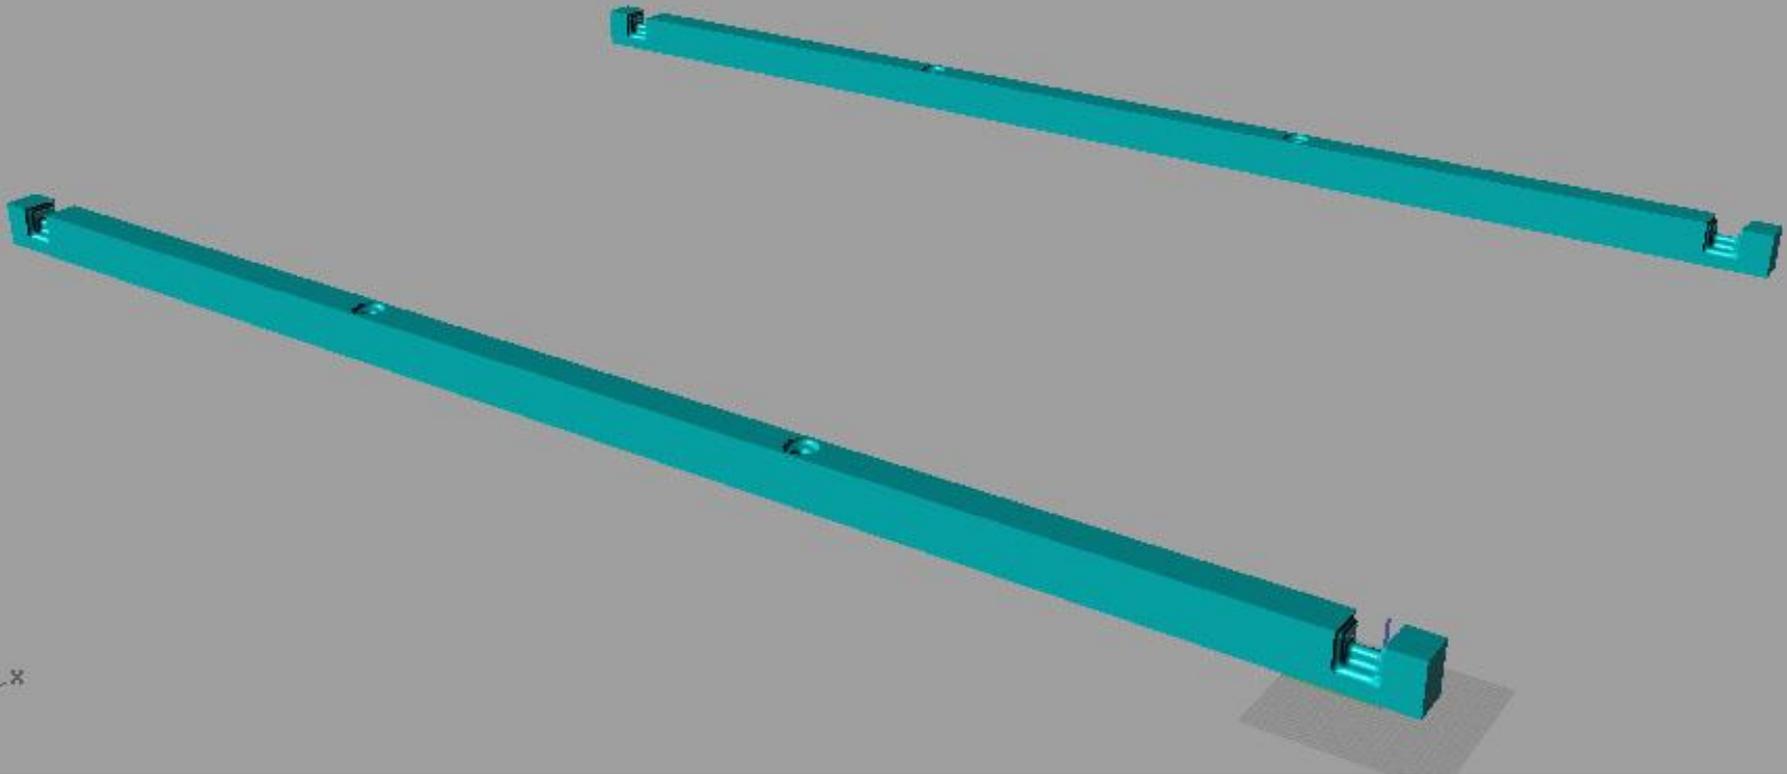

...meno le catene...

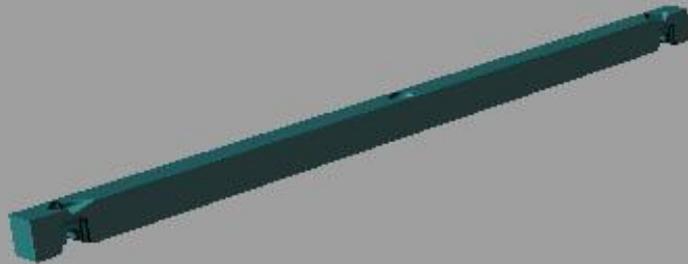

...meno le spine basali...

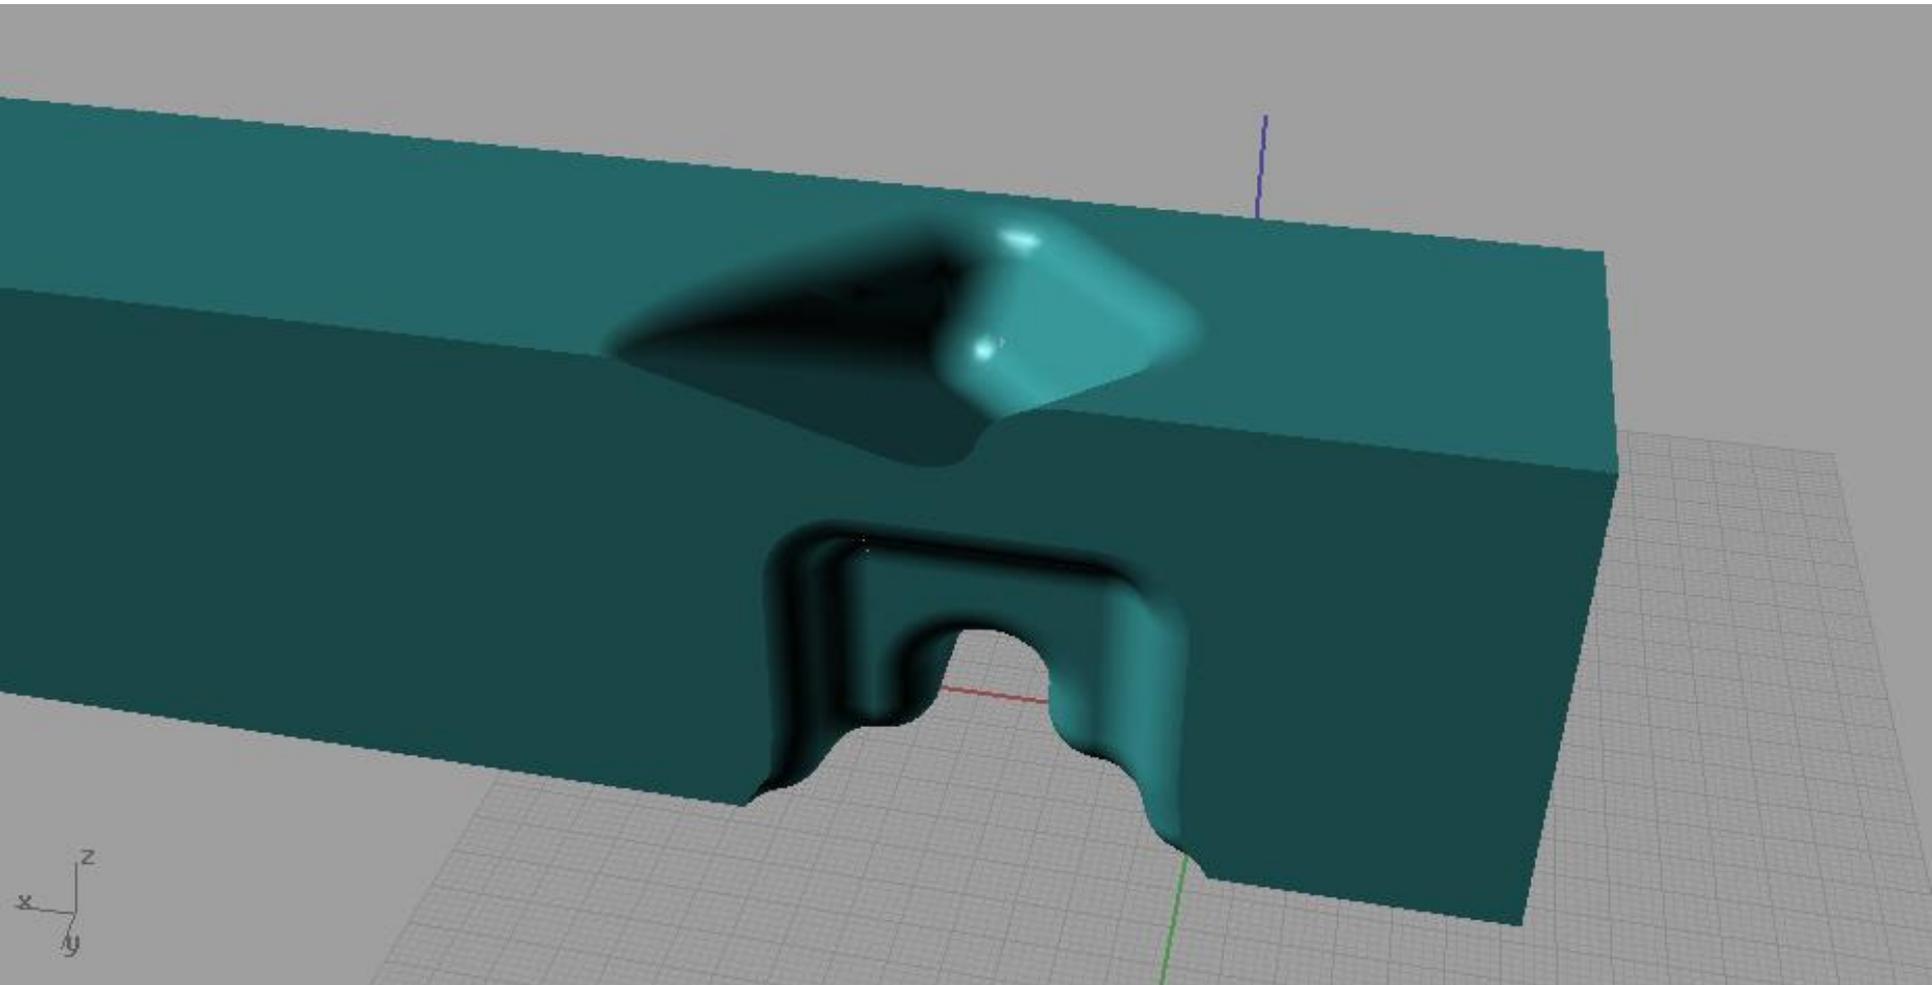

...meno i dormienti, di testa...

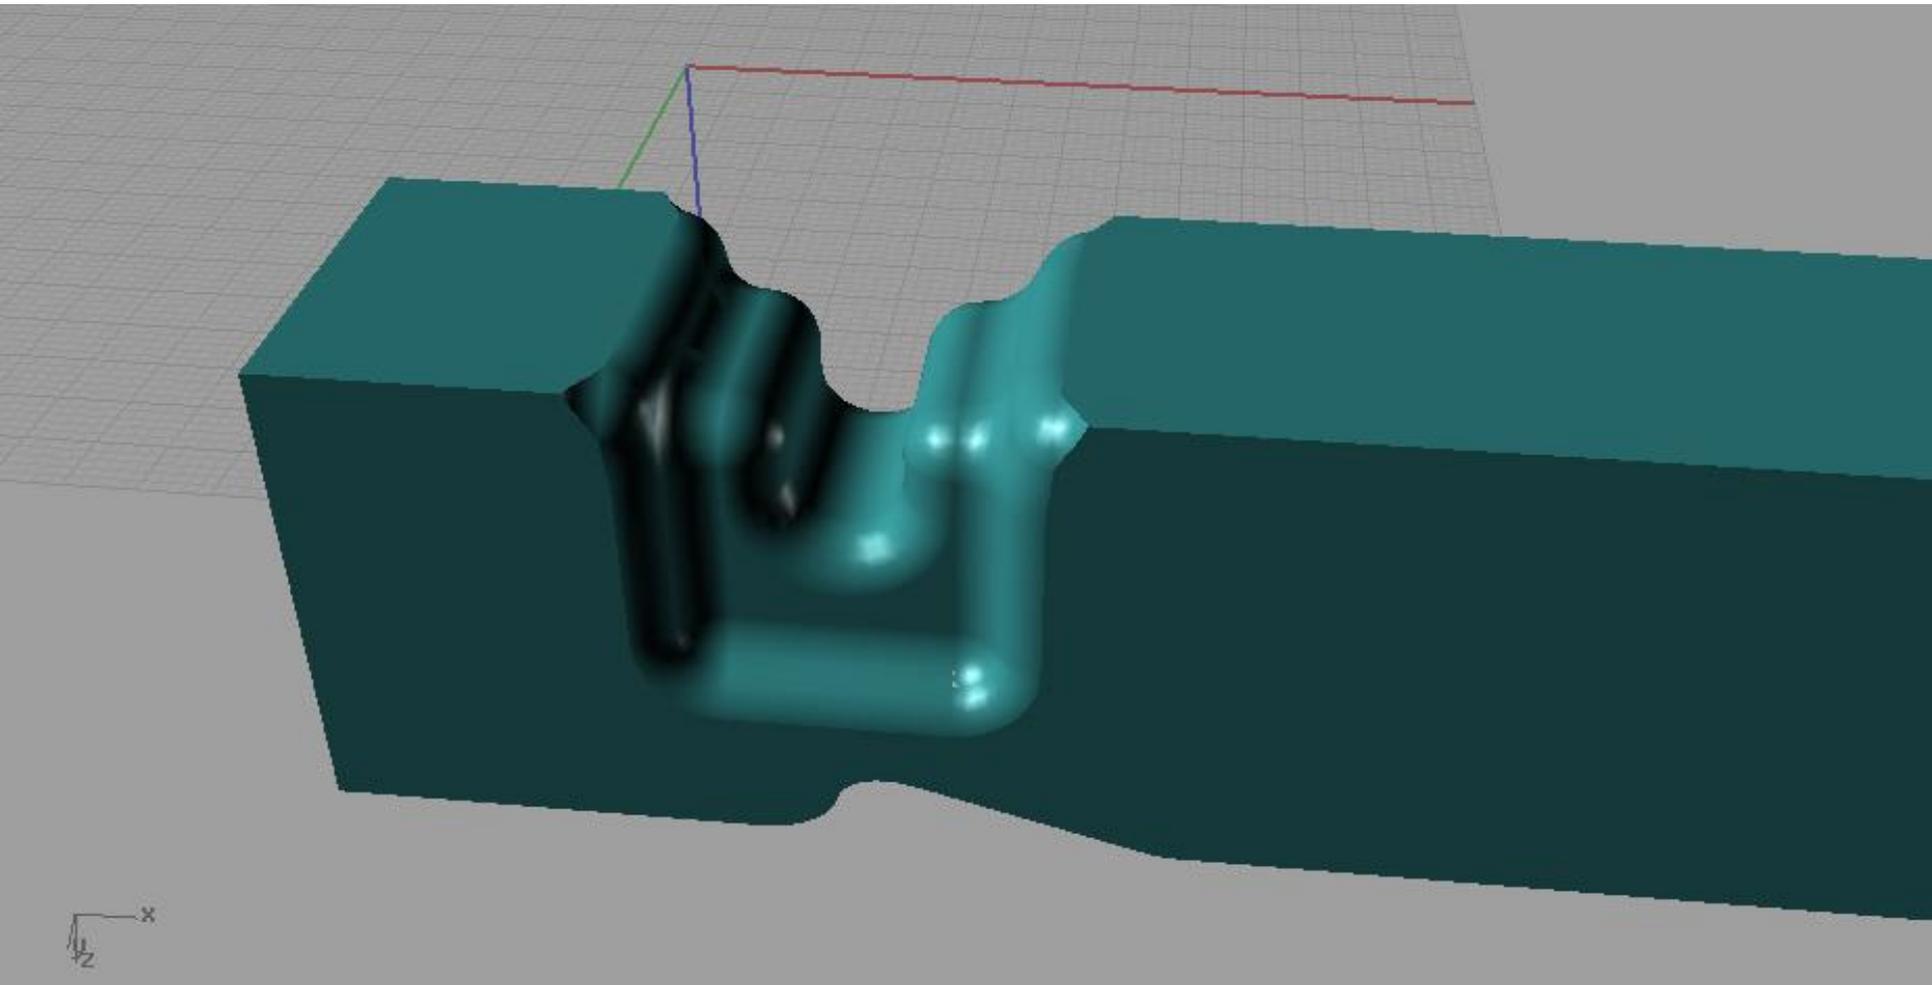

...solo i dormienti, di testa...

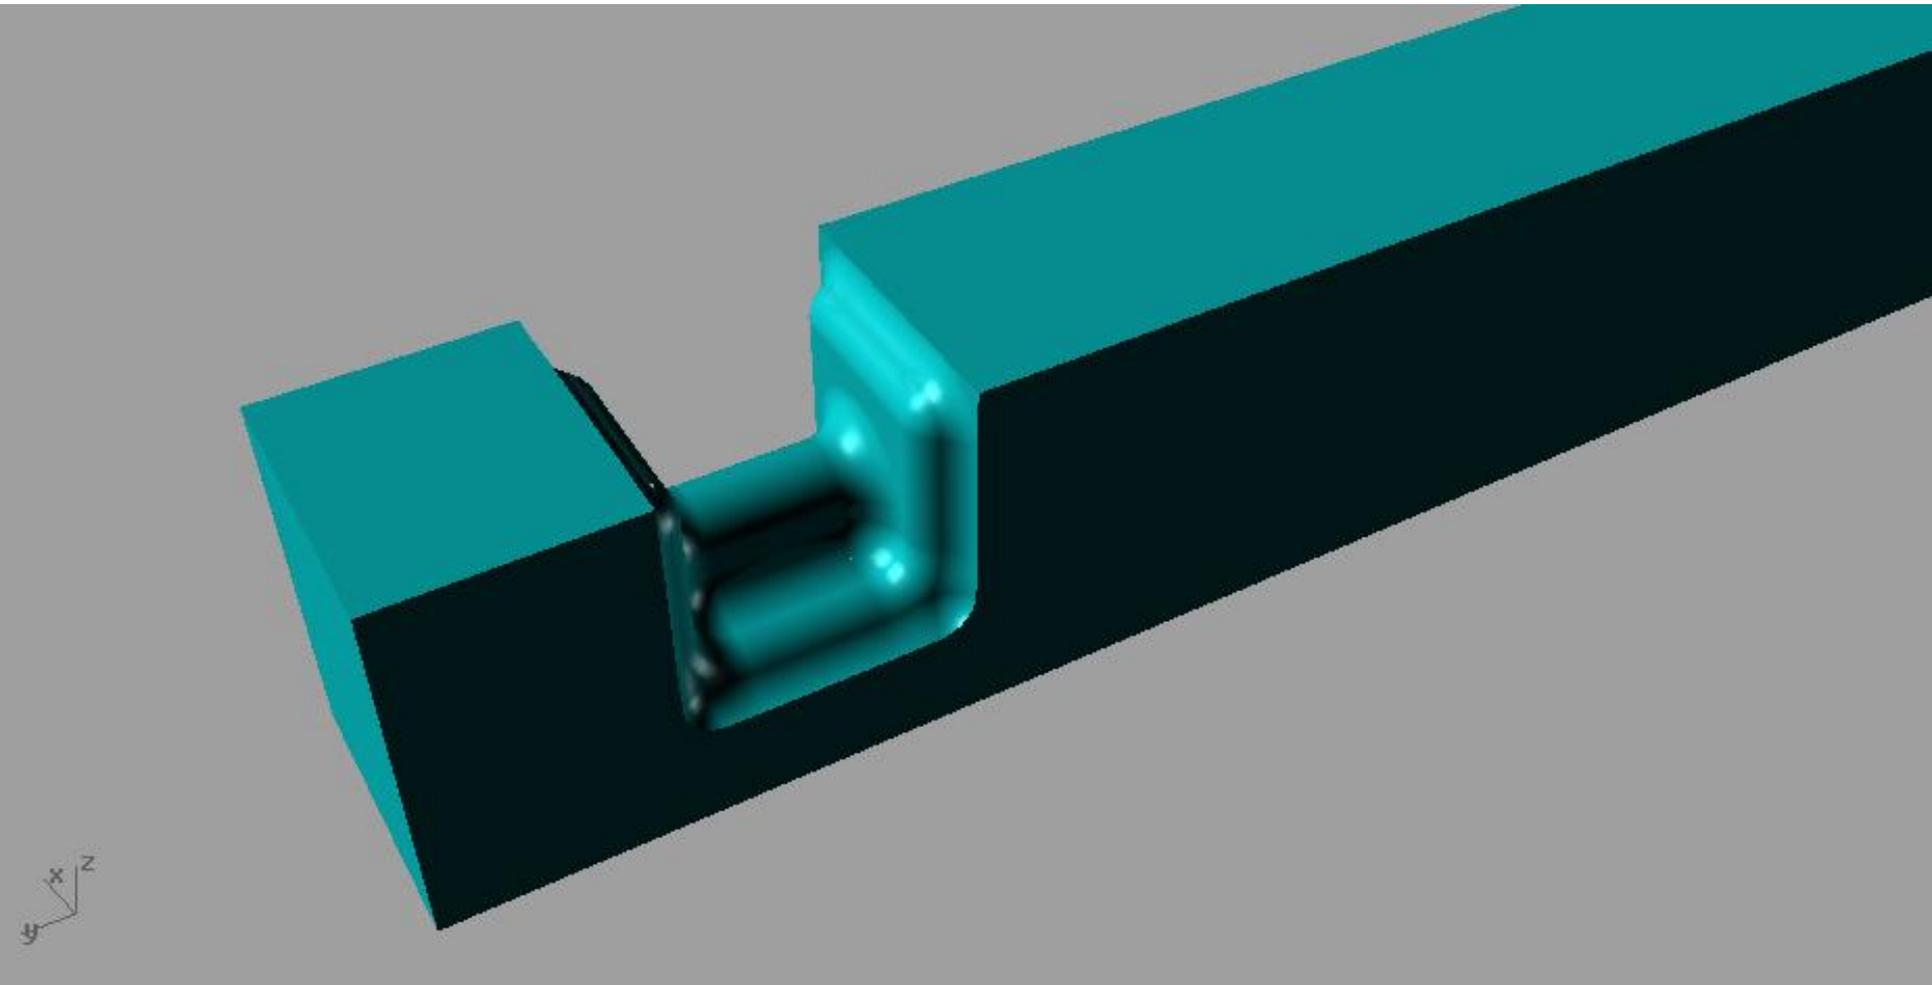

...testate sopra dei dormienti, di testa...

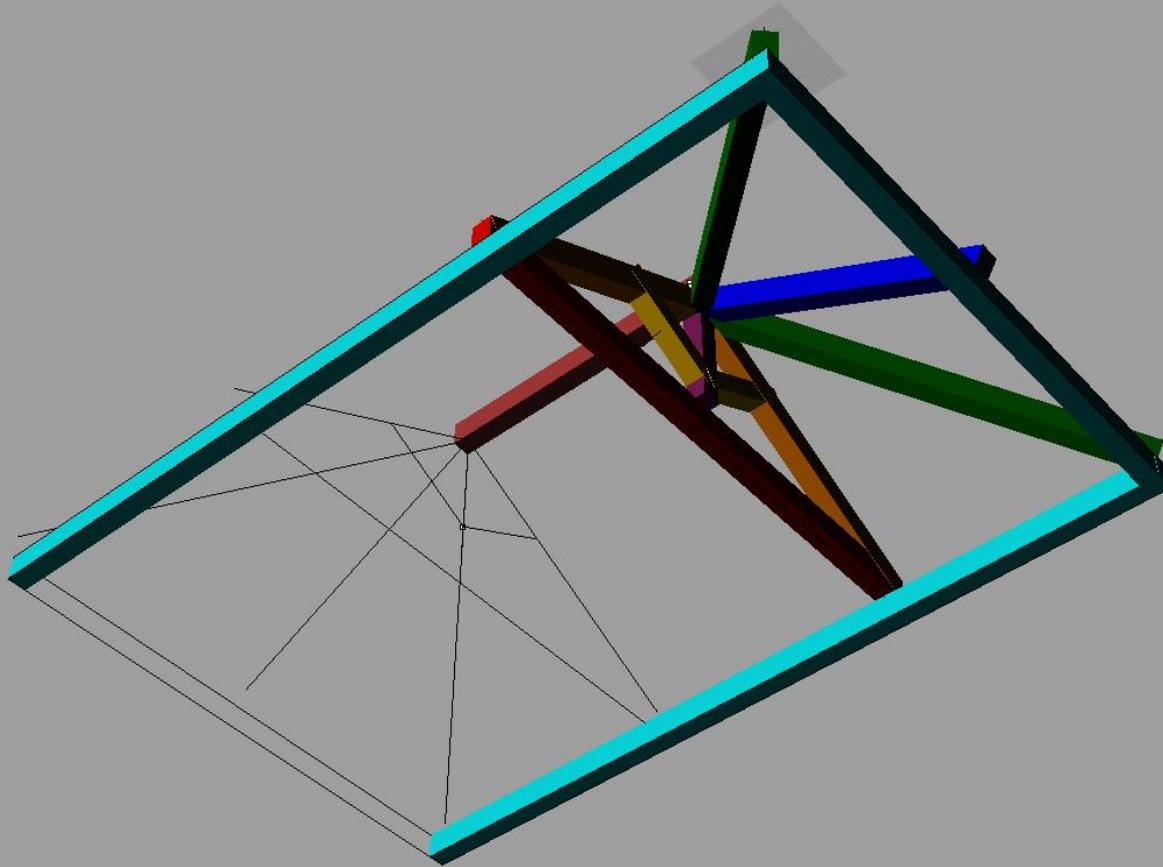

...testate sottosopra dei dormienti, di testa...

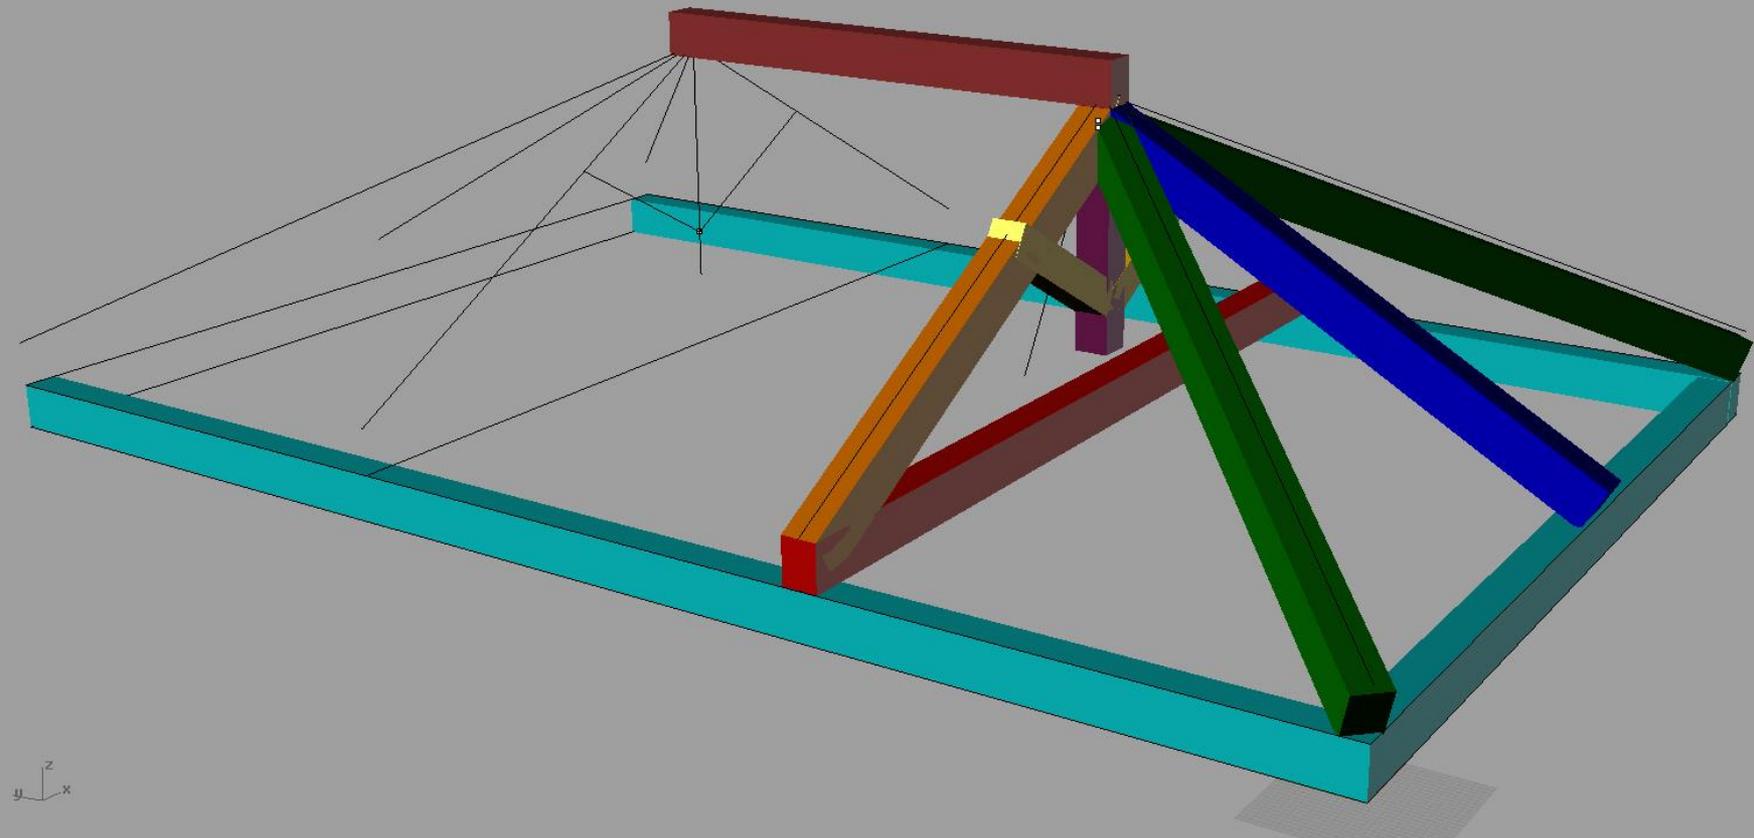

...testate dei dormienti, di lungo...

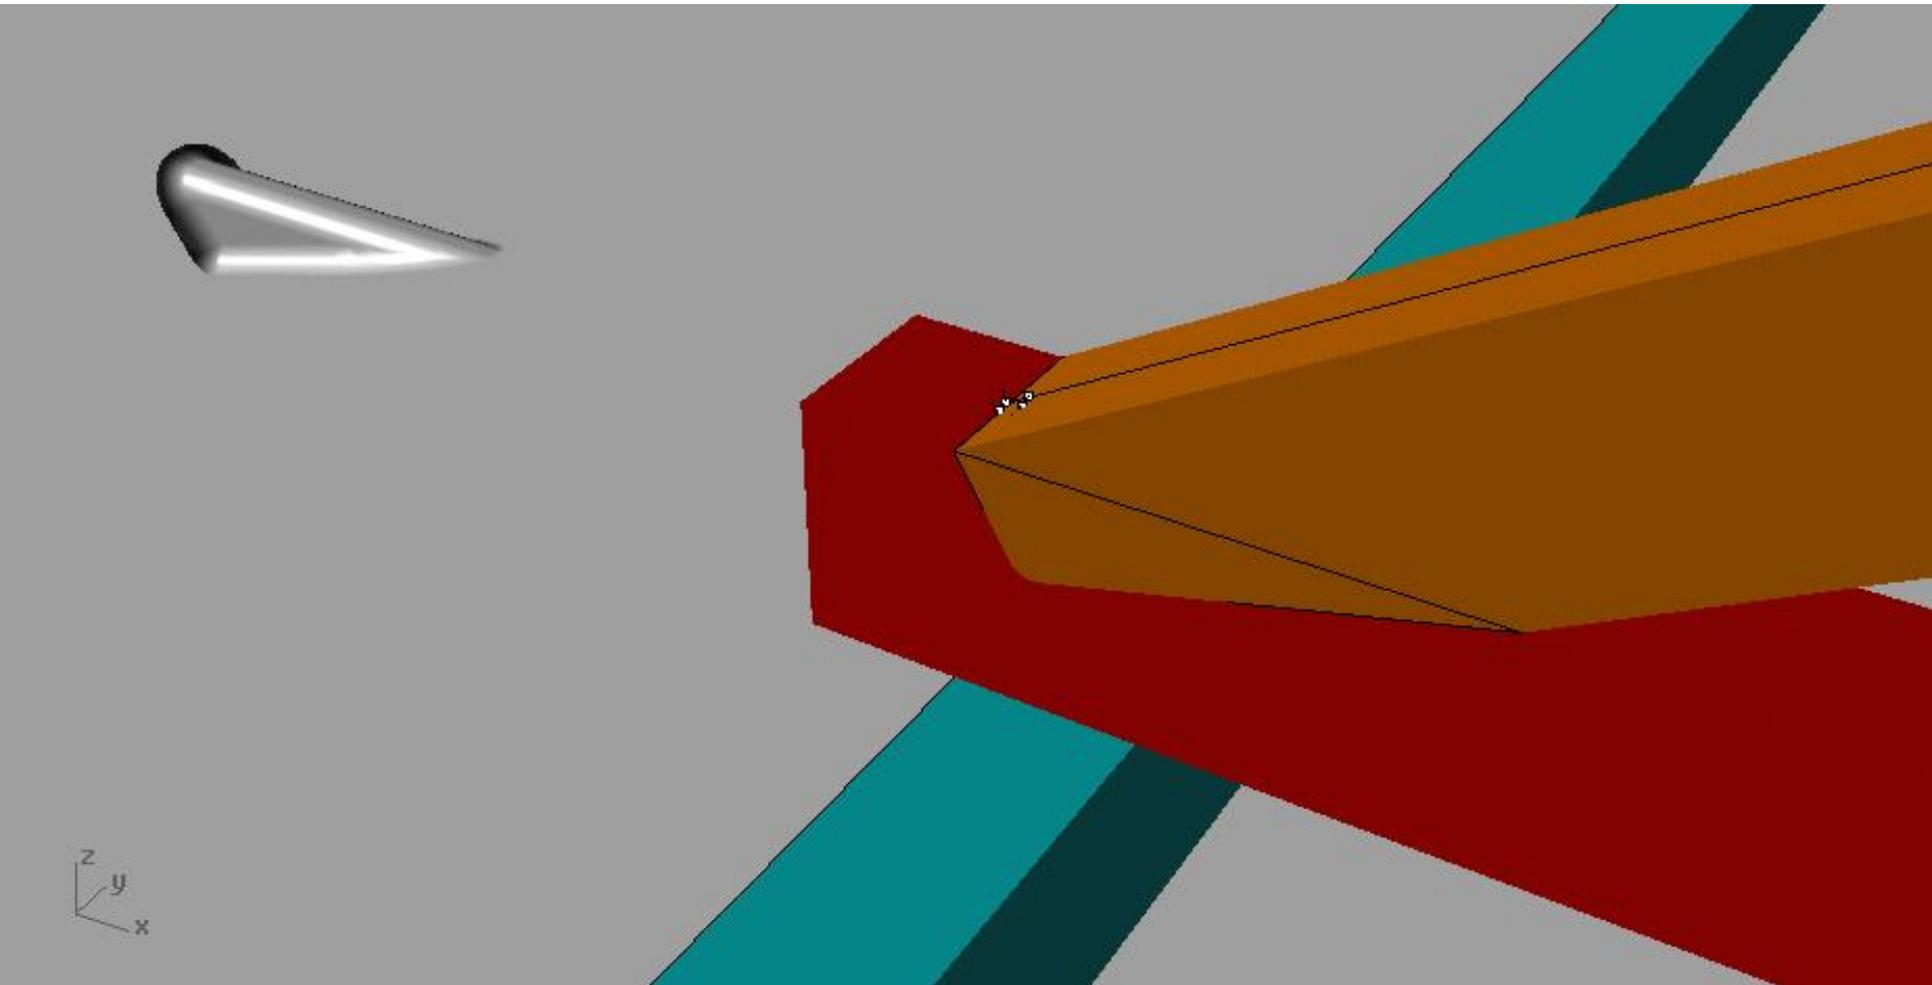

...da sotto, in fase di studio...

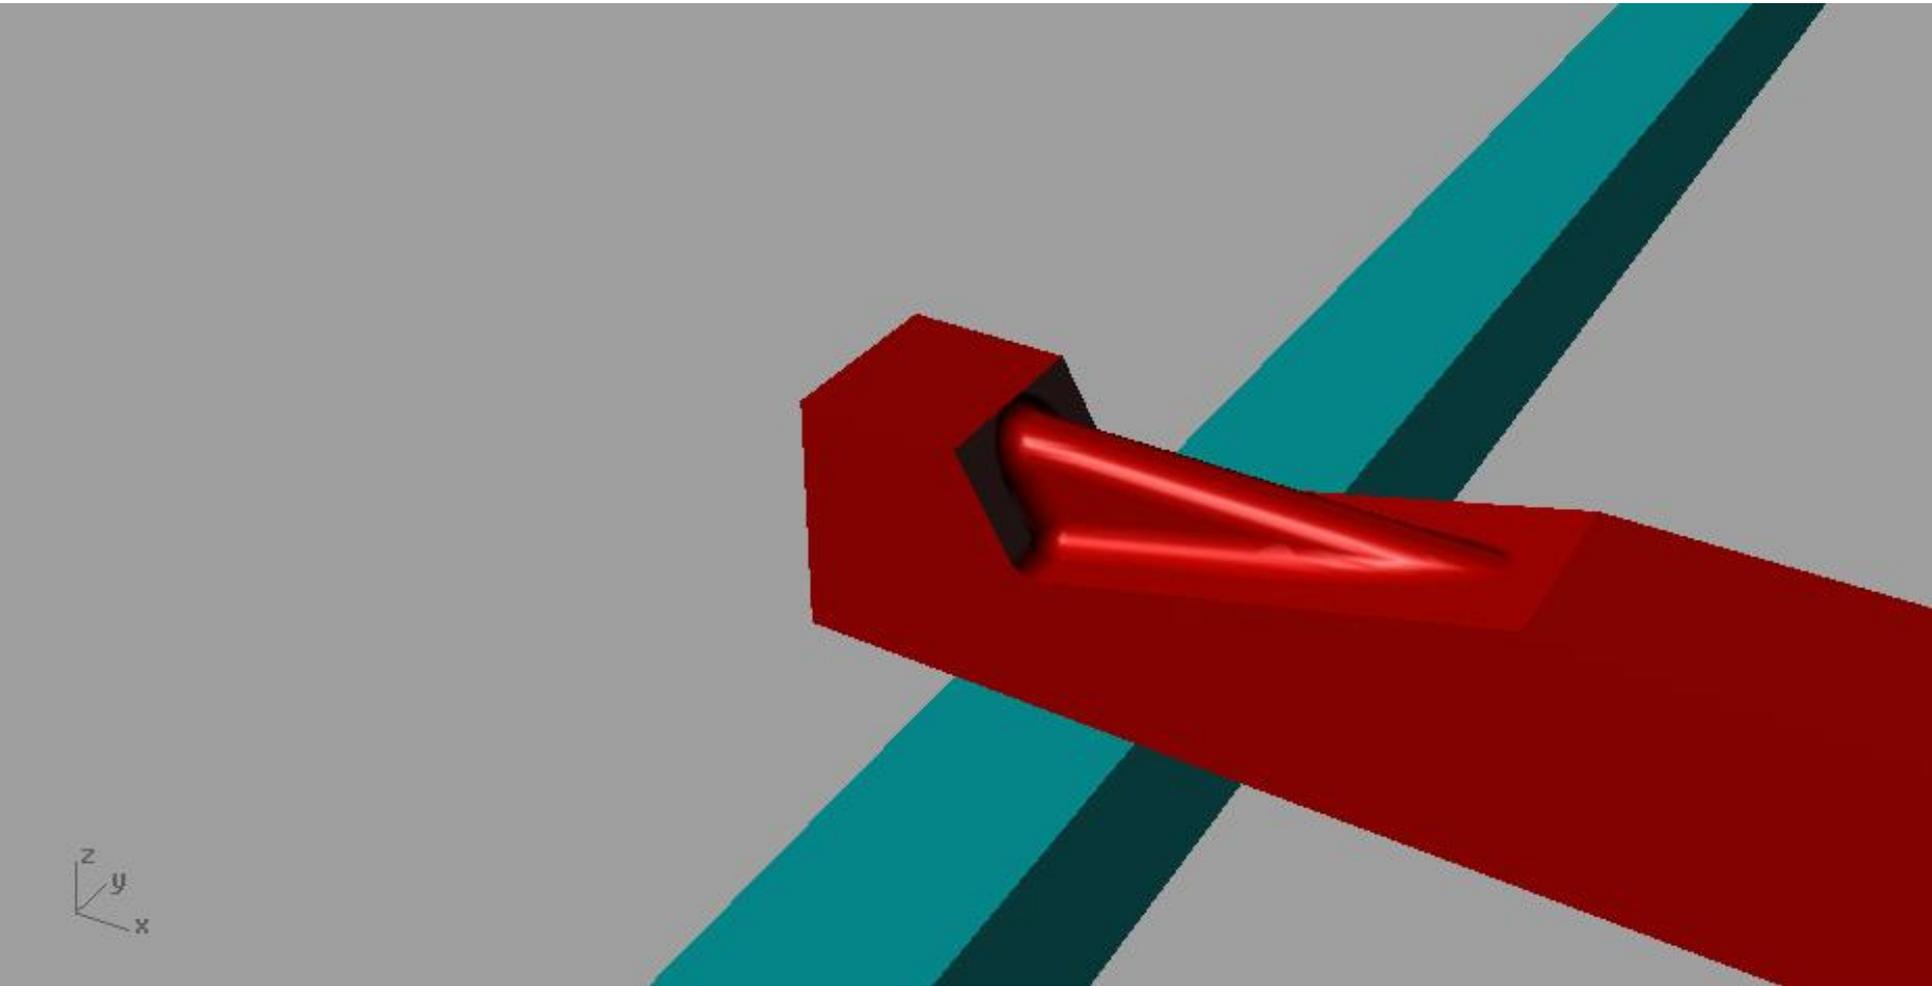

...da sopra, in fase di studio...

...capriata, da sotto»...

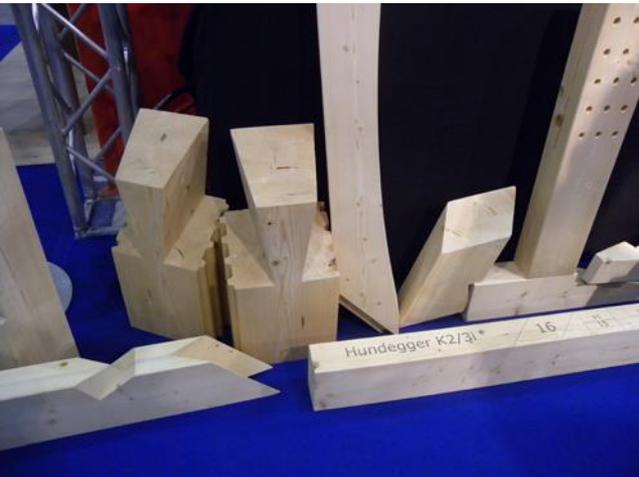

...meno le saette»...

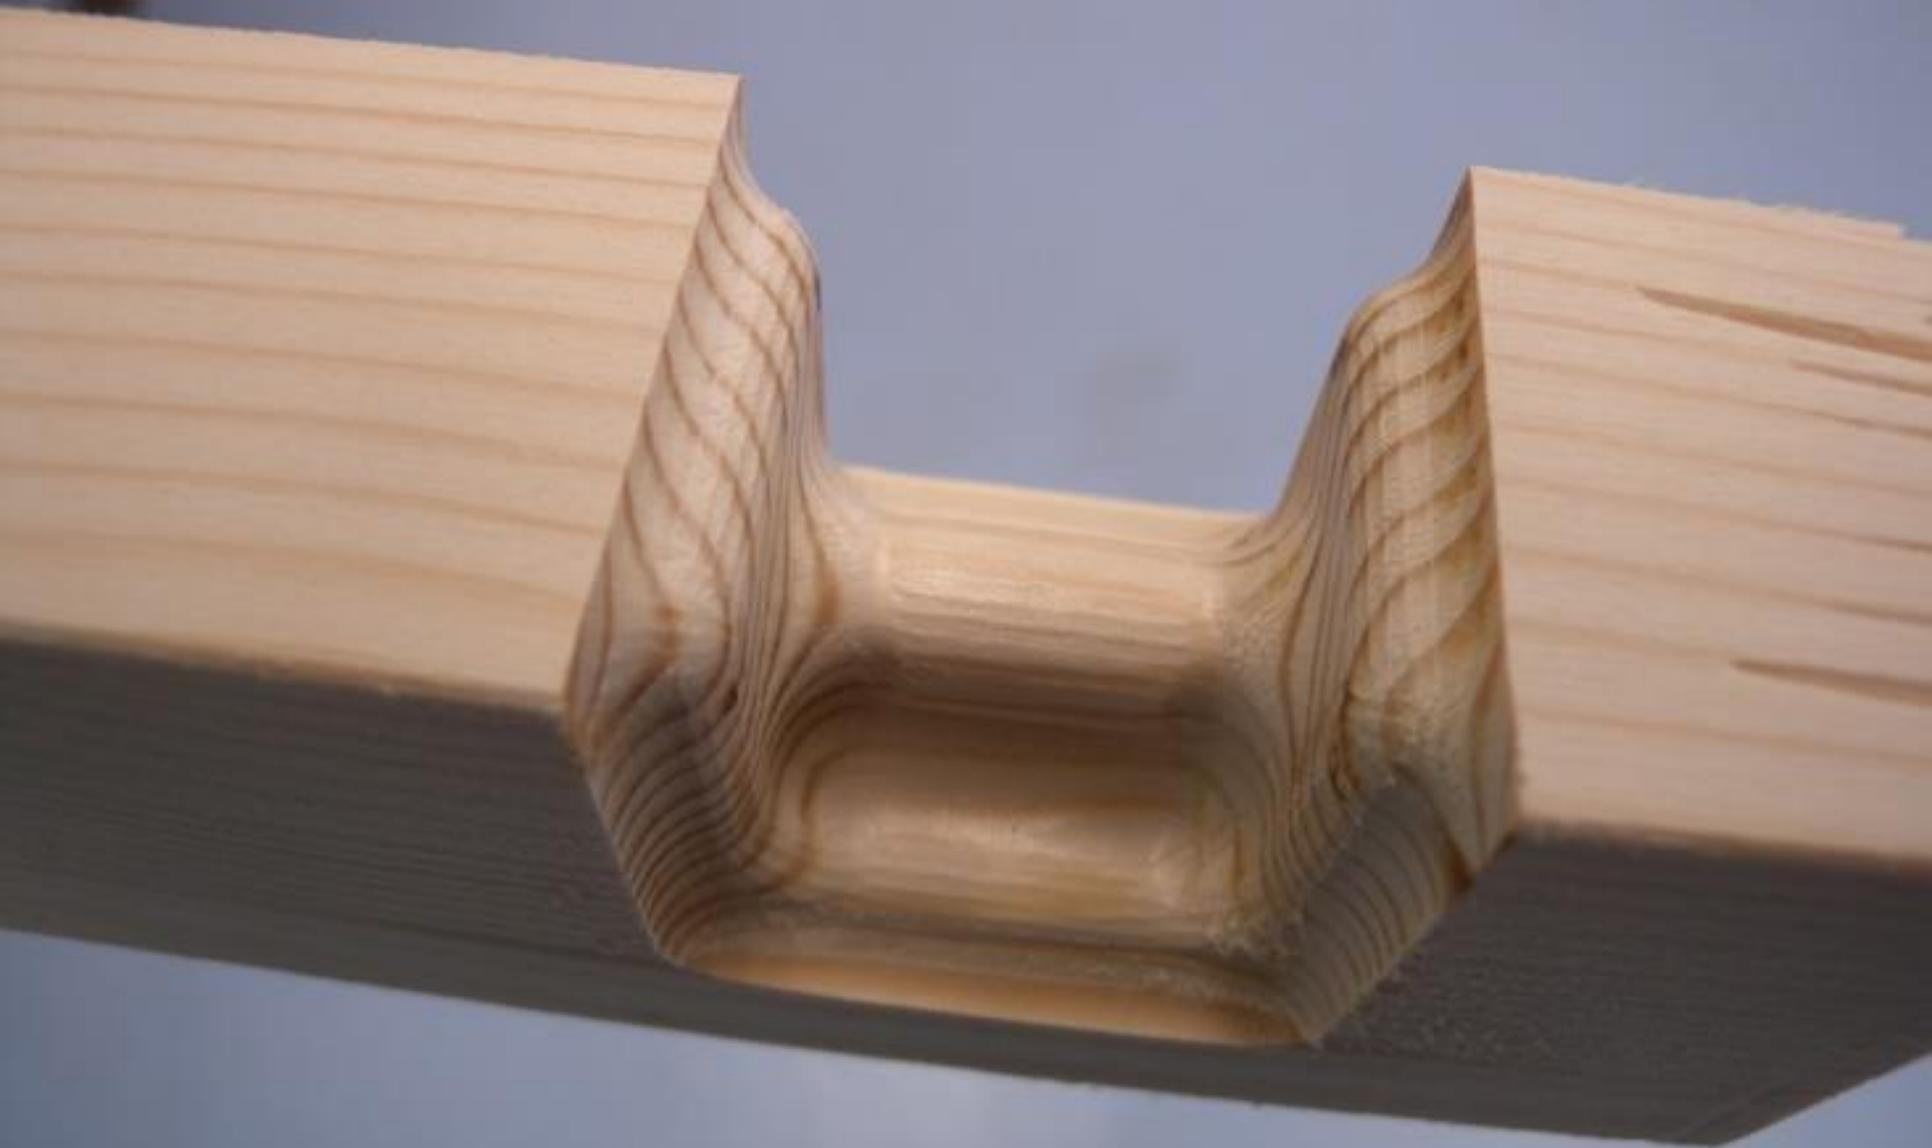

...tetto tutto, da sotto»...

Nello stesso padiglione.

Se si vendono i propri prodotti è giusto compiacersi, ma non si dica che questo rappresenta il futuro del legno.

Mettere il materiale dove serve e risparmiarlo dove non serve.
